2.						
3. EE/FIG		10 JUN 1954				3,5: two plastic containers and one rubber sack forwarded for your info use and testing. We would be most interested to have the results of TSS tests of this equipment. Any other information you would like on subject can be requested from POB.
4.						NOTE: Par 3 of EGLA-14255 states valve on rubber sack is to release air from sack. This is in error for it appears to us that the valve is used to seal off(waterproof??) the sack. Valve leads into an air chamber that runs the width of the sack and in the fold of the rubber flap that is buttoned down over the mouth of the sack. Your comments on this would be appreciated.
5. EE/TEC						NOTE: POB calls the plastic "VINIDUR". I do not have any info on this and disptach says none is available at POB. However, [redacted] 25X1 who has examin these plastic containers says that the plastic appears to be very similiar to that used by the Germans to make photographic developing trays. If so it would thus be acid and alkali proof, at least to a great extent. TSS tests on the acid/alkali resistance of this plastic and also if it would be considered "tasty morsels"by rodents would be appreciated.
6. TSS/R&D/ED						The sealing method(small rod of the plastic material is enclosed in containe is also of interest. How strong is this sealing method. many thanks

COMMENTS

1: This is our answer to our query of a month ago. 25X1
I'll send the samples on to you when they arrive.
For your files, thanks. 25X1

TO 3: Keep this in your files until equipment specified comes - you will get it at once. Ed Wilbur

TO 3: Please to be brought in on this.
JG.

Burial Containers

REF: DCQM-22986, 14 March 1955

1. In accordance with reference, samples of the plastic container and the rubber sack are being forwarded under separate cover. Two samples of the plastic container whic[redacted]re included; one with the cover soldered in place but the bottom removed, the other unused and ready for assembly. Technical specifications of the plastic are not available. 25X1

2. [redacted] advised that they have not recovered any of the plastic contain- 25X1
ers since they were first buried during the summer of 1954, but, a[redacted] 25X1
request promised to recover one during June or July of this year and to submit a full report of condition. Prior to initial burials, the containers were tested submerged in water but not checked for soil reaction, other than by laboratory analysis.

Will TSS handle & endorse?

3. The rubber sack enclosed in the Operational Aids Container is used for the temporary reburial of part of the Operational Aids equipment when the agent does not want to carry the entire contents away. It is also used by [redacted] 25X1

25X1

[redacted]

summer for control purposes to determine approximate condition; a full report of this will be forthcoming.
